### AMENDMENTS TO THE SPECIFICATION

**Please replace the paragraph on page 13 lines 20-30 of the Specification as filed with the following paragraph:**

Said screening, detection and/or quantification method and kit are suitable for detection and quantification of all the transcriptional factors for which the DNA binding sequence is known. These transcriptional factors and their properties are listed in the TRANSFAC.gbf.de Web site "<http://transfac.gbf.de/TRANSFAC/c1/c/.html>" in its The Transcription Factor DataBase. The most commonly tested factors are selected from the group consisting of NF-kB, AP-1, CREB, SP-1, C/EBP, GR, HIF-1, Myc, NF-AT, Oct, TBP and CBF-1. A list of some transcriptional factors and their corresponding consensus (sequences SEQ ID No. 1 to 125) is given in table 1.
